Public Sector Innovation Projects

29.08

What, who and how do we support?

- The long-term development strategy **"Estonia 2035"** outlines long-term goals and main development needs.
- We support **public sector innovation projects** to alleviate the development needs.
- Research-based, innovative solutions to **experiment** and **develop** new ways of doing things but not ready-made solutions.
- Solutions together with **private sector** and **academia**.
- Hoping to use more **innovative procurements**.
- Experimenting on smaller scale to **learn from failures**.

Projects I

- Innovative solutions for detecting prohibited items and substances in prisons
- Intelligent text data search solution to support policy-making decisions
- Next-generation 112: modern and accessible emergency communication
- Development and testing of environmentally friendly asphalt pavement in Viimsi
- Automation of energy label calculation and energy efficiency monitoring for buildings
- Experimental development for assessing the performance and structural condition of existing bridges
- Development of a smart buoy network
- Farm sustainability assessment tool
- Development of an integrated data exchange system for mobility services and ticket sales - MaaS X-Road
- Sign language robot

Projects II

- Using machine learning to perform risk analysis of unfiled taxes
- Autonomous unmanned aerial vehicle system in urban space
- Deep learning applications for spatial data acquisition
- Creation of a dissemination model and technical prototype for digital learning materials and learning management environments
- Pocket Siren – 5G media broadcast for emergency warnings
- Development and testing of data-driven decision-making dashboard in the field of oncology
- Development of CAR T-cell therapy for leukemia patients in Estonia
- DigiVesi: digital tools for managing the development of public water supply and sewage systems

House rules for market consultation

- We are using the input to help to prepare the procurement/R&D exemption of the project **„ Pocket Siren – 5G media broadcast for emergency warnings“**
- The purpose of market consultation is to obtain information about the market. During the consultation, assistance is not provided in preparing offers, the content of future offers is not discussed, and the conditions of the upcoming procurement are not disclosed, **which would give any advantage to the participants in the market consultation**.
- The information presented during the market consultation is not **binding on either party**.

House rules for market consultation

- When using the advice obtained during market consultation, including in shaping the conditions of future competitions, **non-discrimination, equal treatment, and transparency** are taken into account.
- Today's **meeting will be recorded, and minutes will be prepared**. The minutes will be published on the website of the State Chancellery and together with the procurement documents.
- If **information related to trade secrets** is disclosed during the market consultation, the contracting authority must be notified, and it must be clearly stated what the protection of trade secrets applies to.
- The contracting authority **does not compensate** for the costs associated with participating in the market consultation and preparing and submitting information.
